

Pool and Spa Draining and Acid Wash Damage Waiver

The following represents the terms and conditions covering the draining of your swimming pool by your pool service company. Your pool services company has been asked to drain your swimming pool for necessary maintenance and/or repairs.

The following representations are made and should be understood:

- Your swimming pool could shift or rise during the maintenance period due to soil or water conditions beyond the control of your pool services company.
- Plaster problems can vary based upon age, chemical usage and regional water conditions. These variables can cause blistering and/or flaking of the plaster after draining and during water replacement.
- During acid washing, all stains or imperfections may not come out since staining can be deeply imbedded within the plaster. Acid washing is only for surface stains and some chemical deposits will not be affected by the washing.
- Acid washing plaster may create a surface that is not as smooth as a new plaster installation, although care will be taken to provide a finish surface as smooth as possible.
- If pool bottom is not visible, debris removal is limited to small debris (i.e.: leaves, dust, twigs).
- Refilling of the pool is the Customer's responsibility.

It is an express condition of this agreement that your pool services company is to be free from all liability and claims for damage resulting from pre-existing conditions of the pool during the term of our work.

Your pool services company will recondition the pool water using cyanuric acid to manufacturer's recommended levels of 30 to 50 parts per million unless otherwise specified. By signing this agreement, you represent that you have read, understand and agree to these stated conditions. You also agree to indemnify your pool services company against claims or additional costs arising from these conditions.
